

Are You a Proxy Pro? Put Yourself to the Test

A checklist of key capabilities you should be leveraging on your Blue Coat Proxy

You're in good company. Your business has joined 70% of the Fortune 500, making the Blue Coat ProxySG Secure Web Gateway a key component of your security infrastructure.

ProxySG consolidates a broad feature-set to authenticate users, filter web traffic, identify cloud application usage, provide data loss prevention, deliver threat prevention, and ensure visibility into encrypted traffic. There is a lot of power in the ProxySG package, so we pulled together this quick checklist to highlight some key capabilities of ProxySG that can be leveraged to secure your enterprise.

Check them off as you go. Are you using your ProxySG to:

☐ **Authenticate users?**

Your ProxySG has powerful Authentication capabilities. It's ability to integrate with Active Directory Forests and IDP services and support for mechanisms like SAML makes it easy to leverage your existing Auth systems. Traditional corporate access, Guest Wi-Fi, roaming users, etc. are all covered!

PROXYSG**

☐ **Protect from Web threats?**

Your best friend when battling web-based advanced threats should be your ProxySG. Combat Command & Control servers, botnets, ransomware, phishing, malnets, and advanced malware with one of the largest and most powerful civilian threat intelligence networks on the market.

☐ **Decrypt SSL in a Privacy Compliant Way?**

The amount of web traffic encrypted by SSL is exploding. You should care because hackers can hide their payloads inside of SLL encrypted traffic. ProxySG allows you to target the right traffic, the risky traffic, for decryption and inspection, while ensuring that traffic that needs to remain encrypted for compliance reasons remains private.

☐ **Plug into the rest of your IT Ecosystem?**

Your ProxySG can be the quarterback of your IT solution that is focused on web and cloud. Leverage the powerful integrations that are available to your ProxySG into your other systems like SIEM, ATP, DLP, analytics, and forensics/incident response.

☐ Govern all your web and cloud access?

You have a diverse set of users on many devices in many locations, and they have an ever changing list of different locations out on the web that they need access to accomplish their jobs.

Enter ProxySG. Use your proxy for strong policy enforcement for all users and devices, regardless of their location.

About Symantec
